ACTIVE ASSET ALLOCATION IS LOOKING FOR AN ARTIFICIAL INTELLIGENCE ENGINEER

Active Asset Allocation (AAA) is a company established 10 years ago as a financial engineering company and emerging as a leading FinTech over the past 2 years. AAA analyzes the sources of risk in a portfolio and designs robust asset allocation models based on artificial intelligence algorithms. By actively managing downside risk, Active Asset Allocation puts into practice a responsible approach to preserving financial resources over the long term.

The company supports institutional investors (asset managers, insurers, pension funds, foundations, etc.) on several subjects:

- Portfolio risk analysis;
- The design or optimization of an investment solution (Artificial Intelligence);
- The design of a dynamic risk control framework for portfolio managers;
- The distribution of mass-customization solutions, sales and monitoring of savings products to advisers and the monitoring of end customers.

In order to strengthen our Quantitative Research and Artificial Intelligence team, we are looking for a young doctor with a diploma in artificial intelligence.

This position is organized around three elements:

1. Within an international and multidisciplinary team, you will work on the implementation of decision-making solutions and participate in the design and implementation phases of projects: identification of needs, technical specifications, implementation, tests, validation.

You will participate in various projects: data selection, historical data enrichment, stochastic modeling of market scenarios, creation of models, optimization of parameters, implementation of validation tools, etc.

2. The second revolves around reinforcement learning techniques and deep learning applied to more complex quantitative research problems.

3. For the last part, you will participate in the development of our digital platform.
Active Asset Allocation is a company founded 10 years ago as a financial engineering company and emerging as a leading FinTech over the past 2 years. Its mission is to empower each institution and each individual to achieve their financial goals regardless of their level of wealth or education, through a global investment platform. To do this, it places at the heart of its algorithms the objectives, in addition to the behavior of the financial markets, the constraints and risk limits of investors.

In addition to its solutions which make it possible to set up innovative managed / mandated / retirement management offers, based on ETFs and funds, AAA offers fun and educational sales support tools for distribution networks.
